**PROCEDURE:** Goats were immunized with highly purified human IgG h+I and the resulting antiserum was collected. Antibody concentration was determined prior to conjugation using an absorbance at 280 nm: 1.4 equals 1.0 mg of IgG.

**SPECIFICATIONS:** This antibody reacts with human IgG and with light chains common with other human immunoglobulins as determined by IEP and ELISA techniques. It is suitable for blotting, ELISA and IHC applications. This antibody may cross react with IgG from other species. Optimal working dilutions should be determined experimentally by the investigator.
